INVESTING IN DIGITAL ADOPTION TO POSITIVELY IMPACT PATIENT CARE

By Charles Best

Gestalt embraces the era of digital transformation. It is rapidly evolving in all industries but even more so in healthcare where the benefits can be leveraged to have a direct, positive impact on patient care and outcomes. By working closely with our Strategic Advisory Board of Pathologists, customers, partners, and experienced solution team, we continue to deliver more functionality supporting automated, digital workflows that are necessary to drive adoption and meaningful use for laboratories, academic institutions, and research facilities.

We are excited to share how customers can continue to increase efficiencies, speed, and accuracy through our newest version of PathFlow@V5. PathFlow fully supports the integration of multi-vendor image analysis, secure e-signature for report sign-out, Voicebrook integration, and automatic upload of digital assets to cases. In addition to being a flexible and truly interoperable solution, Gestalt's PathFlow will easily adapt to current organizational needs while providing the foundation for future expansion and evolution ensuring the best pathologist workflows.

Overall, digitizing your workflow frees pathologists from tedious, repetitive, and manual tasks allowing them to focus on their expertise –providing their invaluable knowledge and expertise where it matters most –on the interpretation, diagnosis, and patient.

PATHFLOW INTEGRATION EXCEEDS EXPECTATIONS

By Ethan Lynn

Recently, Gestalt announced the ability to integrate results from PathFlow directly into a leading system's proprietary, report-specific templates. This remarkable connectivity was developed after extensive research and experience to create an interoperable connection between the historically independent LIS and Gestalt's digital pathology solution, PathFlow.

With interoperability as core to our team's mission, enabling pathologists to work within one solution by seamlessly creating orders for add-on stains, recuts, and streamlining reporting capabilities, this development truly bridges one of the many gaps between anatomic pathology and digitized workflows. EXPANDING GESTALT'S ADVISORY BOARD

By Lisa-Jean Clifford

We are honored to have Dr. Miller join our esteemed Advisory Board. We are looking forward to his contributions based on his strong industry and operational leadership at a time when our digital pathology solution is leading in the market. Dr. Miller has deep experience in multiple aspects of pathology, including the adoption of digital pathology at an industry-leading enterprise healthcare organization. His career-long passion which includes cardiovascular, autopsy, and transplant pathology is an excellent fit with our vision and solution direction.

OUR TEAM SHINES

By Jamie Papp

Previously, Lisa-Jean Clifford discussed creating a culture of innovation and the challenges that it poses working in a remote environment. In a recent interview with one of our engineering team members, we were thrilled to hear that cross-collaboration thrives throughout our teams despite working remotely.

As Lisa-Jean highlights, our colleagues are some of the brightest, most passionate, and most energetic professionals we know - after all, they are the creators of PathFlow.

They are truly the best of the best!

A Message from the CEO

Leaning in on our announcement of PathFlow V5, the future is bright for digital pathology. The digital landscape is where innovation, improvements, and adaptations support quick integration and adoption. Gestalt's team of engineers and scientists, along with our Advisory Board of Pathologists are mission-bound to make PathFlow the most flexible, truly interoperable streamlined digital solution.

Our commitment to customer success is to work side-by-side with organizations to ensure we find the best customized digital workflow, AI algorithms, or IT services solutions for their needs. Thank you for allowing us to serve you and your organization's needs.

Onward and upward,

-Dan
